FLEXENTIAL®

8 Key Components of
Application Performance & Reliability

Users
Everything begins and ends with the users. Understand their requirements.

01

People & Teams
Enable people and teams. The best architectures, requirements and designs emerge from self-organizing teams. Automate like crazy.

02

Visibility & Observability
Create transparency and make data-driven decisions that intelligently prioritize low-effort and high-impact opportunities.

03

04

Security & Compliance
Integrate security, compliance and risk management controls and their teams across all components.

Connectivity
Choose data centers and providers with the connectivity capabilities to serve your users, avoiding latency and bottlenecks that slow down the user experience.

08

It's a continuous cycle

Application Chain
Consider everything that makes up the application: the software, the processes, the teams. Place workloads wisely. Automate high-risk and critical operations.

07

Infrastructure
Optimize infrastructure for application performance and reliability. Reduce repetitive operational tasks with automation.

06

05

Architecture
Transform architectures for performance, reliability and resilience. Embrace modern, virtualized and automated design principles.

Use a holistic approach and data-driven decisions to make iterative improvements. There is no one-size-fits-all answer.

Enable excellent user experiences by providing the application performance and reliability users require, every day.
